

3D MOVING SAND ART FLOWING SAND PICTURE

3D quicksand art painting, the combination of colored sand and luminous glitter creates an ever-changing and unique sand landscape.

The circular design makes it different, not only modern, but also showing a unique calm atmosphere. Can be given as a sincere gift to your loved ones.

How to use

- ① When using it for the first time, please put the moving sand art painting on the shelf for at least 30 minutes, and perform the first 360-degree rotation.
- ② Before each inversion of the sand art liquid movement, please let the sand stay for a while to better form the scene.
- ③ Bubble stuck is a normal phenomenon because bubble buoyancy and sand gravity balance, which the probability of the situation is very small.
- ④ A natural balance of water, sand and air is required. The height of the air is about 5mm, and the sand will reach a better flow rate.
- ⑤ Only need to take it left and right shake a moment, making sands concentrated in the bottom, while the fixed proportion of the air inside will be scattered into small bubbles, then it can be reversed.

How to Adjust Bubbles?

For specific operations, please refer to the video below the main picture.

Quicksand falls too slowly: pump out some air bubbles

Quicksand falls too fast: add some air bubbles

Turn the sand painting to make the bubbles move near the air hole and make sure there is no sand near the air hole. Insert a syringe into the air hole to adjust the bubbles.
