

Instruction Manual for battery operated candles with remote control

The candles are child & pet friendly and can be used safely throughout the home.

The candles use a high-quality LED bulb which provides approximately 50,000 hours of lamp life. Each candle operates on 2 x 1.5v AA batteries (not included).

Note: the candles are NOT completely weatherproof. Avoid leaving them in direct sunlight and do not expose them to rain or adverse weather conditions.

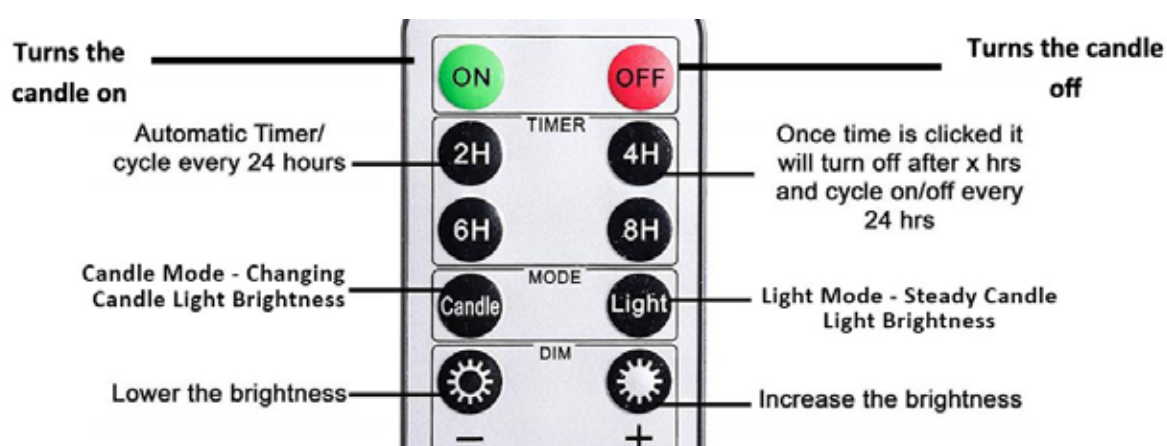

Battery insertion instructions:

- Open the battery compartment cover located at the bottom of each candle
- Insert 2 x 1.5v AA batteries into each candle's battery compartment. Do not mix different battery types or brands. If the candles do not switch on, please check that the batteries have been inserted correctly and ensure you are using new batteries
- Replace the battery compartment covers and slide the small off/ on switch position to 'on'
- Alkaline batteries will give the best performance and will last longer
- Do not use rechargeable batteries
- The remote control uses 1 x CR2025 battery (included). To replace this battery, slide the battery compartment open which is located at the rear of the remote and replace it with a new battery.

Using the remote controls

Its only possible to control individual candles if they are not placed close to each other.

In order to control an individual candle please ensure it is positioned away from the other candles and point directly at it when selecting your desired function.

How does the timer setting operate?

If for example you select the 4H timer at 6pm, the candles will turn off automatically at 10pm (i.e. 4hrs later), and will turn back on at 6pm the following day. This process will repeat continuously based on this setting.
