Overview
This product provides a C wire (common wire) to power a thermostat. Only install if you do not have a C wire available to connect to your thermostat.

ZONING CONTROL PANEL CHECK
For zoned systems, install the C Wire Adapter between the thermostat and the zoning panel, NOT between the zoning panel and HVAC equipment.

1. Turn the power off at the breaker box or control switch for your HVAC system.

2. Remove your old thermostat from the wall plate.

3. Take a picture of the wiring. Ensure the terminal labels and wires are in the image. You may need to reference the picture later.

4. Confirm that you do not have a wire in the C terminal. If you have a wire in the C terminal, then you do not need this product. Look for an unused wire. If you have an unused wire, then you do not need this product. Connect one end of that wire to C terminal at the HVAC and the other to C terminal at new thermostat.

5. Go to your HVAC system. It may be located in your attic, crawl space or basement.

6. Take a picture of the wires on the control board.

7. Use the provided stickers to label the following connected wires:
   - G
   - W or W1
   - R or Rc
   - Y or Y1
   - Not all systems will have a W or W1 wire. On a heat pump application, the wire coming from O/B on the old thermostat would match to either O or B at equipment rather than W.
   - If multiple wires are connected to a terminal, only label the wire running to your thermostat.

8. Disconnect ONLY the wires that you just labelled:
   - G
   - W or W1
   - R or Rc
   - Y or Y1
   - Do NOT disconnect wires that you did not label.
   - If multiple wires are connected to a terminal, only remove the wire running to your thermostat.
   - On a heat pump application, the wire coming from O/B on the old thermostat would match to either O or B at equipment rather than W.

CONTINUE
Before mounting, check to make sure surface is clean enough to ensure good adhesion.

Mount C Wire Adapter inside the furnace using included mount and adhesive pad.

Connect the wires from the “Equipment” labelled side of the C Wire Adapter to the matching terminals on the control board.

If there are separate wires to W and O, leave the W and O wires attached at HVAC and do not connect them to the C Wire Adapter.

Label your now converted wires as shown.

The wires you label C and K are the wires you inserted into the C and K-terminals in step 9.

Confirm you have labelled ALL of your wiring.

Disconnect the wires from the old wall plate.

If there are separate wires to W and O, leave the W and O wires attached at HVAC and do not connect them to the C Wire Adapter.

Label ALL of the remaining wires according to their terminals.

When done wiring, you should have wires in the C and K-terminals.

You should not have wires in the Y or G-terminals.

Complete your new thermostat’s installation by attaching the thermostat to the wall plate, restoring the power, and configuring the thermostat.
