Utensils

The Nuwave Culinary Team recommends the use of high-heat-rated, silicone-based tools for cooking foods. Do not use metal utensils on the cookware.

Recommended Heating

To maximize the performance of your cookware, avoid long-term or repeated exposure to high heat that can cause food to scorch, burn, or discolor the cookware and potentially damage the coating.

For best results, allow the cookware to heat between 280°F and 300°F for up to 1 minute before inserting and cooking foods. Avoid preheating empty pans above 300F.

Maximum Recommended Heating	
Oven	450°F for your cookware and metal lids.
Stove top	450°F or medium-high heat for your cookware.
For long lasting Non-Stick Performance	
Low to medium heat is recommended to ensure the longevity of the ceramic non-stick coating.	

Smoke Point

If using oil, do not exceed the oil's smoke point. Smoke point is the temperature at which oil begins to break down to glycerol and free fatty acids producing a bluish smoke. This signifies the beginning of flavor and nutritional degradation.

OIL TYPE	SMOKE POINT	OIL TYPE	SMOKE POINT
Avocado Oil	520°F	Canola Oil	435°F
Grapeseed Oil	485°F	Vegetable Oil	420°F
Corn Oil	440°F	Sesame Oil	410°F
Peanut Oil	440°F	Extra-Virgin Olive Oil	405°F
Sunflower Oil	440°F	Coconut Oil	400°F

MAINTENANCE

CLEANING AND CARE

Nuwave® Duralon® Blue Ceramic Non-Stick Cookware is an investment that is meant to last for years. The following instructions will not only help you properly maintain your cookware, but they will also help to extend your cookware's life to the fullest.

We highly recommend hand-washing your cookware with a mild liquid soap. While Nuwave Duralon Cookware can be washed in the dishwasher, the harsh detergents can shorten the lifespan of the cookware.

Always:

- Let your cookware cool, away from heat, before washing it. Wash after each use with a mild dish soap and non-abrasive cloth or sponge to maximize the longevity of the non-stick coating.
- Rinse your cookware thoroughly and dry it with paper towels or a soft cloth. Use a hanging rack to store your cookware (where possible). If cookware must be stacked when storing away, towels or paper towels can be placed between each cookware to prevent scratching or damage to the coating.

Never:

- Attempt to cut foods while they are in the cookware or use cooking sprays, harsh abrasives, metal scrubbers, or heavy-duty cleaning chemicals. They will damage the Duralon coating, inhibiting functionality and voiding the warranty.
- Run cold or warm water over hot cookware. Never immerse hot cookware in water. This can damage the Duralon coating and may cause the pan to warp.
- Heat your cookware above 450°F or allow it to boil dry.
- Use Alkaline materials such as baking soda on the cookware as it may adversely affect the lifespan of the non-stick coating.

Note: A mixture of vinegar and water may be used to clean your Duralon Cookware.

Do not boil the vinegar water as doing so will alter the chemistry which may affect the non-stick properties of your cookware.
