

Natural Reed Decorative Fencing

Size: 6 ft. H x 16 ft. L or 4 ft. H x 8 ft. L

Designed to create a rustic backyard look and feel with a Reed fence that is spaced enough to allow for some filtered light, yet adding some privacy to feel secluded. Versatile eco-friendly, sustainable material, the Reed fence is the perfect solution to beautify a chain link fence or to hide unattractive old fencing. Use it as an outdoor screening, fencing, or simply as a decorative backdrop.

CONSTRUCTION OF REED FENCING:

This natural fencing is constructed from fresh water reed that grows abundantly along River banks, Wetlands, & estuaries. The pre-assembled panels are carefully woven together by vinyl coated wire to ensure a stunning design while remaining seamless. Our peeled reed fence panels come in natural and coffee shades.

INSTALLATION:

Installation is easy with staples, zip ties, or wires. Simply run a wire into the fencing and then twist it onto your existing chain link fence to hold it up.

CUTTING & HANDLING OF REED:

Reed Fencing can be cut easily. For vertical cuts, use wire cutters and cut through the wire between the reeds. For horizontal cuts, roll the panel tightly and cut with a chop saw. A tight roll with a sharp cabinet grade blade will render a clean sharp cut. A dull or construction grade blade or a handsaw may tend to tear at the reed making for a rough edge.

Installation Method:

Material Installation Nail Method:

Once the application surface has been prepared, pre-drill finishing nail sized holes through the face of the reed panel. It is recommended that holes are drilled 1" from the top and bottom of the reed edge every 10". Be sure to drill slowly through the center to avoid cracking or splitting. Additional pre-drilled holes are recommended as needed for on-site reed conditions. Apply nails to the Studs in the wall where possible. Reed should be held firmly in place while finishing nails are applied through pre-drilled holes.

Installation Method 2:

Material Installation Zip Tie Method:

Once the application surface has been prepared, Unroll the reed fencing along the fence line, starting from one end. If you have posts, position the reed fencing against the posts, aligning the top of the fence with the top of the posts. Secure the reed fencing to the posts using zip ties along fencing wire.

Alternatively, you can use wire cutters to trim the excess fencing and attach it directly to an existing fence or structure. Reed should be held firmly in place while attaching any ties. Repeat as necessary and inspect the entire fence to ensure it is secure and visually appealing.

Materials and equipment:

Box knife, carpenters chop saw with quality cabinetry blade, (60 teeth and up) tape measure, electric drill, drill bit, hammer, finish nails.

Drilling, sawing, sanding or machining wood products can expose you to wood dust, a substance known to the State of California to cause cancer. Avoid inhaling wood dust or use a dust mask or other safeguards for personal protection.
