

Pot and Pan Rack (18SM2802)

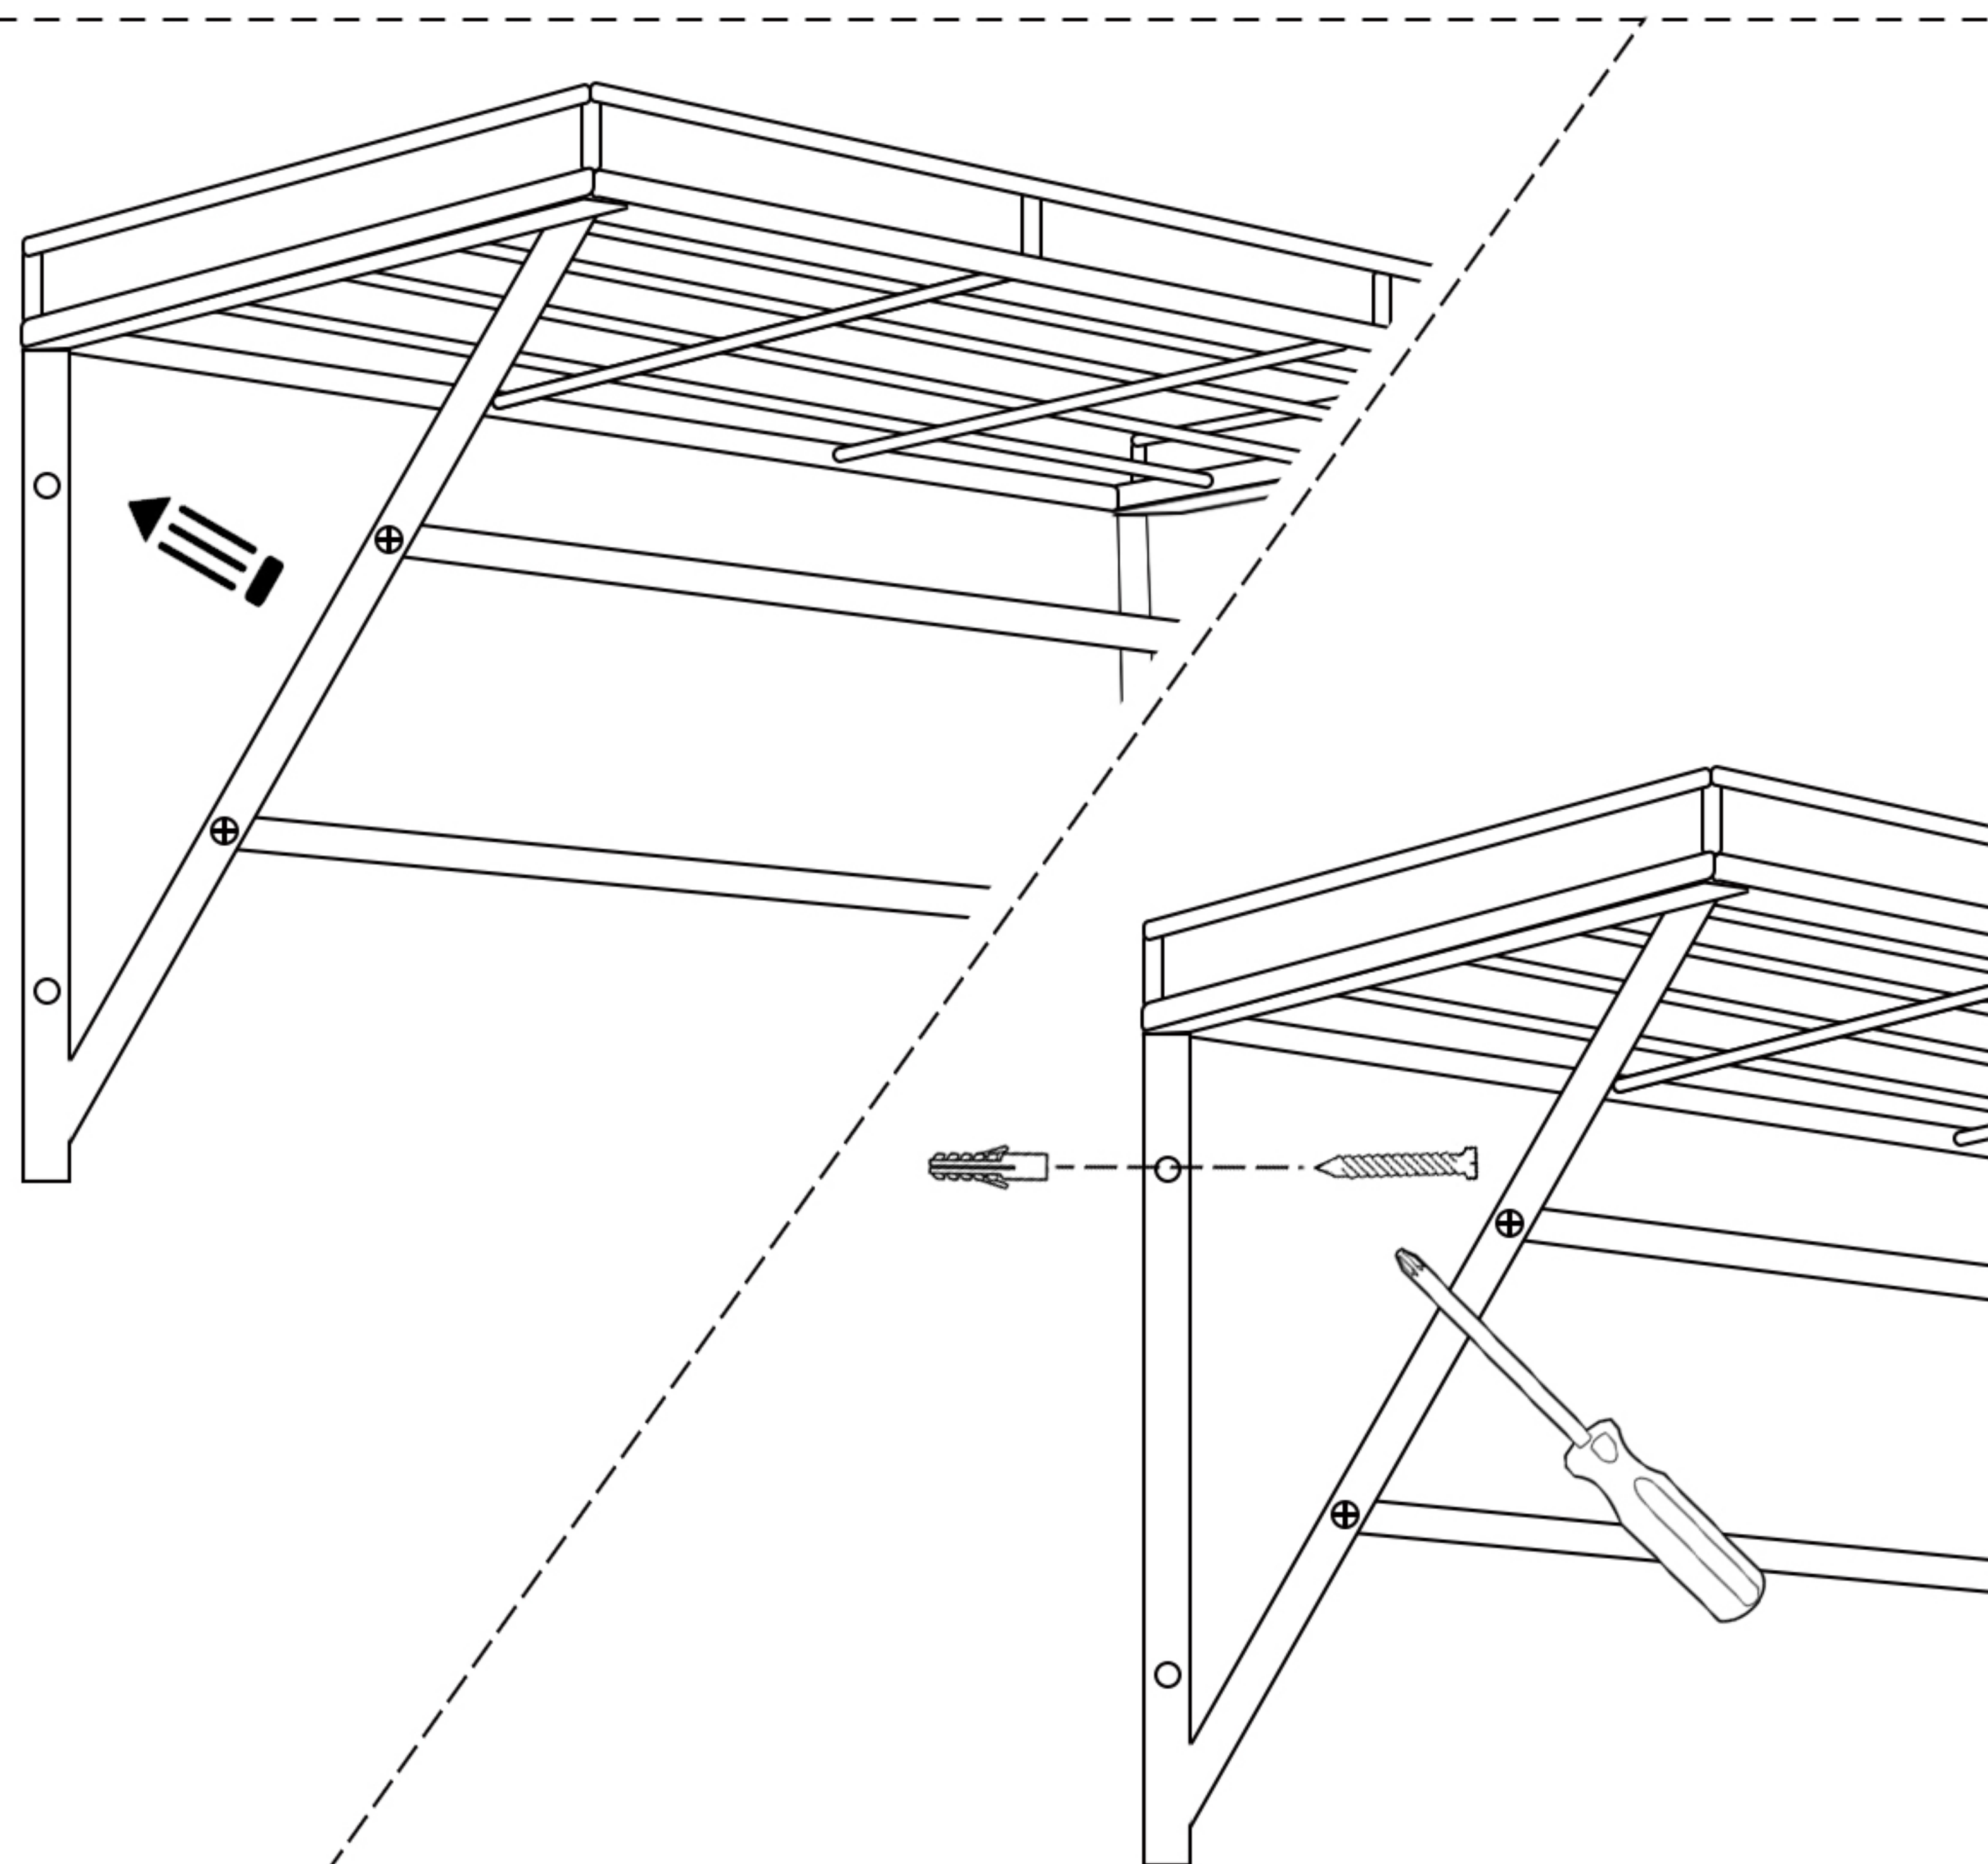

Tools Needed for Installation:
Hand Drill or Electric Drill (6mm bit) , Pencil , Screwdriver

A. Please distinguish the left and right triangular brackets before installation. Vertical piece of the bracket with the holes to attach the bars are the inside of the unit. (please see the picture above)
Notice: if you find that cross bars are short, simply reverse the left and right.

B. Install the storage shelf with the two triangular brackets with the screws and nuts (please simply reverse the left and right triangular brackets if you find the holes in storage shelf is not aligned with the holes in the triangular brackets).

C. Put the pot rack against wall and mark holes with a pencil (cooperation with another person is suggested) then drill 4 holes with a electric drill (1/4"/6mm bit) hammer the expansion bolts in the holes gently and then screw the pot rack on the wall.
