Installation Introduction

- 1 Choose a flat, dry and clean wall
- 2 tear the plastic sheet bit by bit
- 3 stick the led strip on suitable surface
- 4 Connect power and controller
- 5 Connect the controller and the light strip. Note that the arrow must be arrow-to-arrow when connecting.
- 6 For the best use effect, the connection at each end should not exceed 32.8ft, otherwise the power supply and controller will be damaged.

Installation Tips

1. please use the power adapter that we equipped or the same specification adapter as ours.
2. The input voltage must meet the voltage required by the light
3. The output power of the adapter (KW value) must be equal to or greater than the power of the Led strip lights
4. Check whether the controller and the light are connected correctly.
5. Check whether the remote control is open, remove the insulation sheet, and whether the remote control battery is charged.
6. Ensure that is being used within 5 meters and aligned to the infrared receiver of the controller

WARNING

- The battery case and receiver do not immerse in water.
- The LED sriip light kit do not immerse in fire.
- Childern unde age of 16 should use this product adult supervision
