

Aquarium Setup Guide

Includes

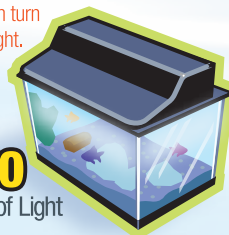

Important advice that will make your aquarium experience simple and successful.

Success Tip 1 Lighting

Only keep aquarium lights on for 8-10 hours during the day, then turn off at night.

8-10
Hours of Light
per day

Success Tip 2 Feeding

Give your fish one small pinch of food 2 or 3 times per day.

1 Pinch
of Food
2-3 times per day

Success Tip 3 Water Changes

Only change 25% of the water once per month.

Never empty all the water at once.

25%
Water Change
monthly

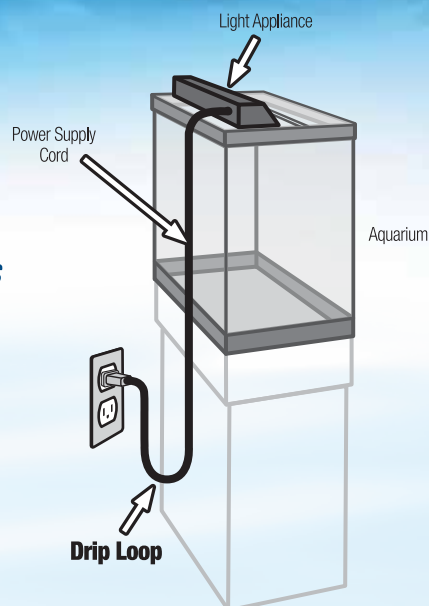

Making Success Simple

Drip Loop

Whenever you plug in any electrical appliance, it's important to utilize a "drip loop". This prevents water droplets from reaching the electrical outlet, which can cause a severe hazard.

To make a drip loop, follow the diagram to the right. Simply drop the power supply cord below the level of the outlet you're plugging it into. This way, if any water should get on the cord, it will drip off before it reaches the electrical outlet.

See reverse for additional information.

1. place aquarium on Strong, Stable Surface

- Place aquarium evenly on a level surface so that all sides of aquarium are supported.
- Surface should be able to easily support more than 100 lbs.

2. add Gravel

Rinse gravel in colander

- Carefully pour rinsed gravel into middle of aquarium.
- Spread gravel evenly around aquarium bottom.
- Gravel depth should measure 1" - 3" from the bottom.

3. add Plants, Décor

Rinse plants and décor items

- Place plants and décor items into aquarium in desired location.
- Cover base of plants and bottom of décor items with gravel to hold securely in place.

4. add Water

Add Water Conditioner as directed

- Pour room-temperature water into aquarium over hand to avoid moving gravel, plants and décor.
- Fill aquarium with water to 1/2" from top of frame.
- Add water conditioner.

5. place Filter

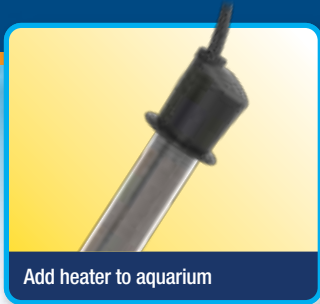

Rinse filter cartridge before use

- Assemble filter and insert filter cartridge according to included instructions.
- Place filter in designated location on back of frame.

6. add Heater (optional)

- NeoGlow LED Aquarium Kit Size 10 includes a heater. Heaters for other kits must be purchased separately.
- Read and follow included heater instructions.
- Place heater just to one side of the filter and suction to the back of the aquarium.

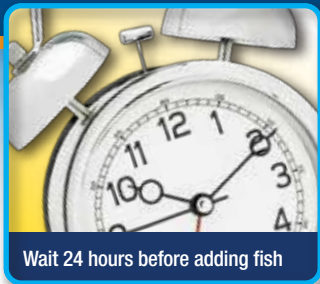

7. add LED Hood

- Place light hood on aquarium, making sure filter and heater cords flow through opening in back of light hood to ensure proper fit.
- Plug in filter, light hood and heater using the "drip loop" method. (see above)

8. add Fish

- Turn off light, unplug and remove light hood.
- Place fish, while in bag from store, into aquarium. Let sit for 20 minutes.
- Open bag and add about 1/2 cup of aquarium water. Wait 5 minutes. Repeat once.
- Carefully allow fish to enter aquarium. Replace light hood and plug in.

Simply succeed!

Follow the Three Tips to Succeed along with the setup guide instructions, and you'll spend more time enjoying a healthy aquarium and less time maintaining it.
