Baby safety bed Guard Rail instruction manual

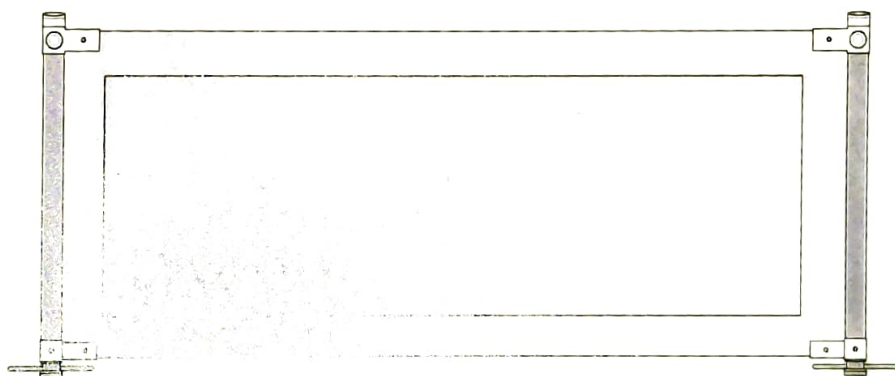

Vertical lift

Safety does not drop the bed
Safety field for baby growth

Bed Guard Rail Component:

Bed Guard Rail Installation Steps :

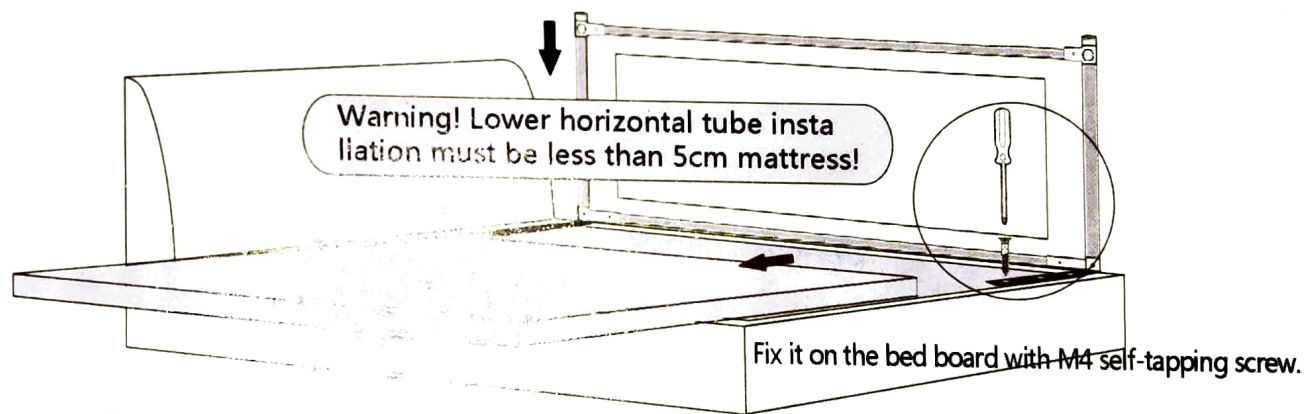

Gear height adjustment step

7-speed adjustable height
Choose the right height and gear according to the different thickness of the mattress

Insert the foot seat into the lifting rod hole slot and fix it with special pair of locking screws

How to install it on the bed

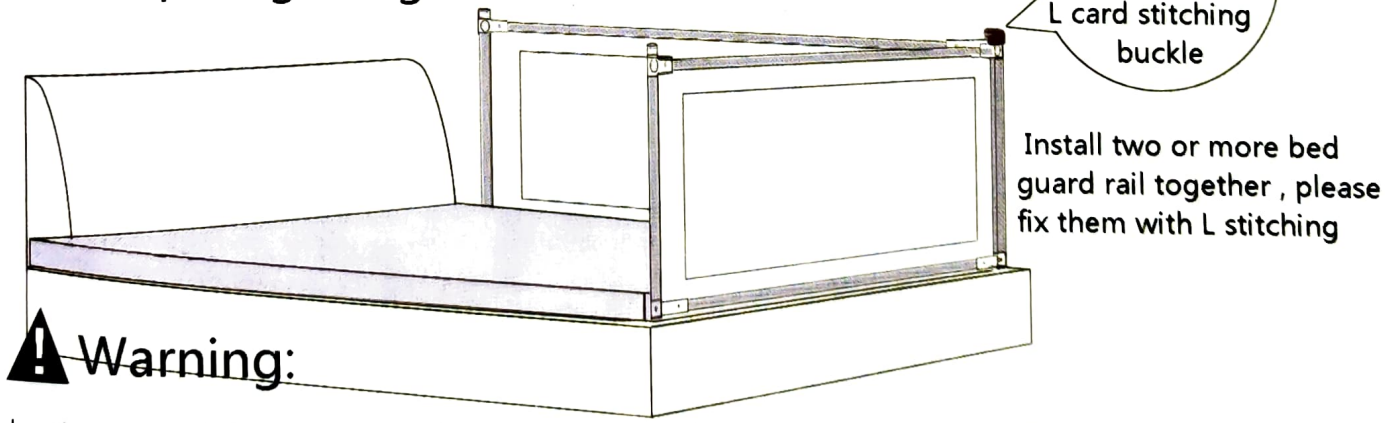

Warning! Lower horizontal tube installation must be less than 5cm mattress!

Fix it on the bed board with M4 self-tapping screw.

Remove or lift the mattress from the bed and place the bed rail into the bed
Ribs bed or iron frame bed frame gap should be less than 12cm before
The ribbed and the iron frame bed can be tightened and fixed by ropes.

L card splicing fixing method

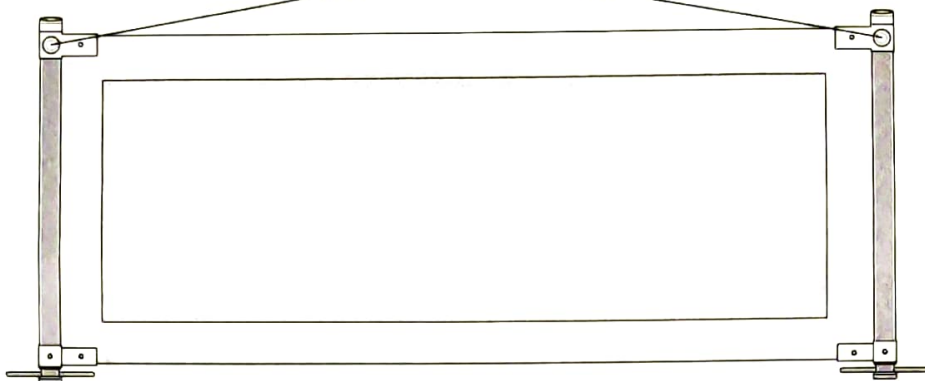

L card stitching buckle

Install two or more bed guard rail together , please fix them with L stitching

Warning:
when the bed fence is installed on the bed, the horizontal pipe under the fence should be installed less than 5cm below the mattress!
Two pieces of installation, fence feet should be fixed on the bed board, above fixed with buckle.
Two or more pieces of installation combination, lifting rod clearance should be greater than 12cm or above.

Lifting function usage method

The elevating joints need to slow down and close vertically at the same time

Lifting function: the innovative design of vertical lifting structure can smoothly lift function up and down. The movable joint moves up and down to expand or fold and close, which is more suitable for different requirements of bed fence function in different time periods.

Lifting method: start the left and right joint braking button, make the internal spring locking mechanism loosen, the left and right parallel vertical lifting, at the same time the bed Purse Seine cloth folds up naturally, so as to achieve direct folding and cooperation, convenient for adults and babies to get out of bed.

Precautions!
