

QUICK START GUIDE

1844, 1842, 2290 SERIES

BARKBATH

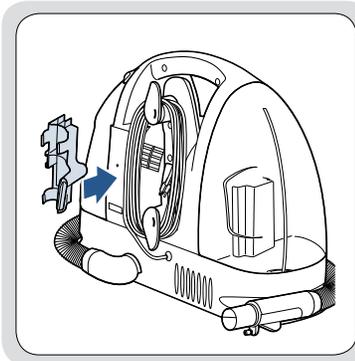

PORTABLE DOG BATH

⚠ WARNING
Refer to the enclosed user guide for complete instructions and important safety notices.

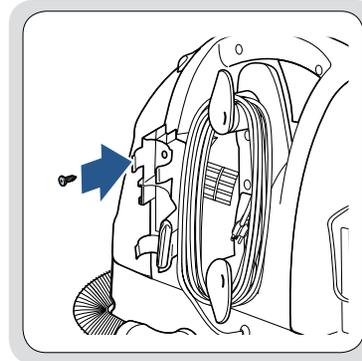

Instructions

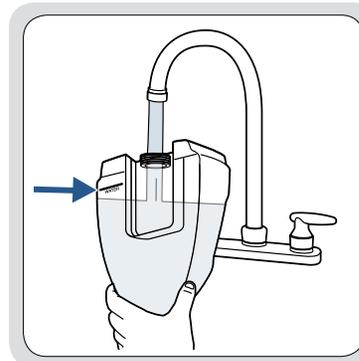

1. Slide the back plate of the flex hose clip into the opening on the front of the unit. You will hear a “click” when it is locked in place.

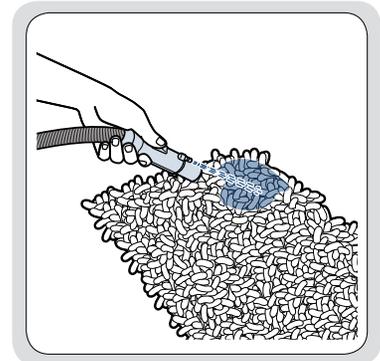

2. Slide the lower plate of the flex hose storage bracket into the opening on the back of the unit. Make sure the screw hole lines up.

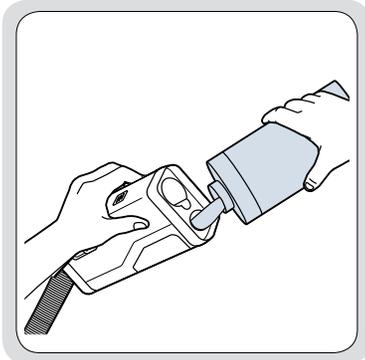

3. Insert screw and tighten with a screwdriver.

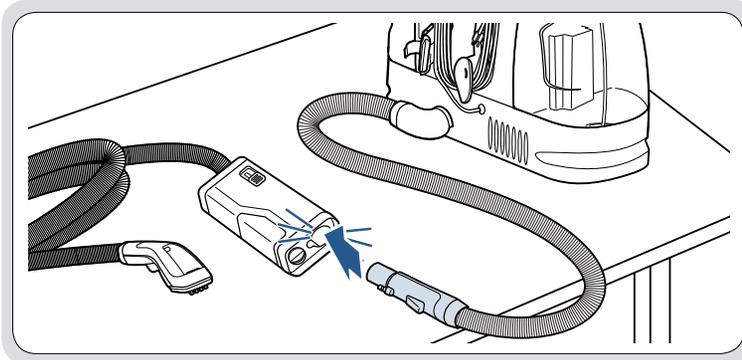

4. Get ready to prime the system. Fill the base unit clean water tank with warm-to-the-touch tap water to the fill line.

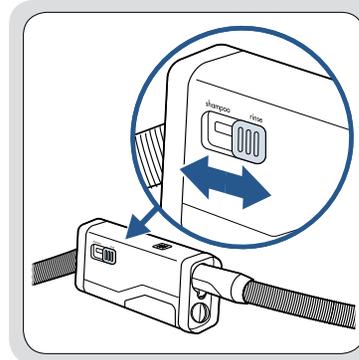

5. With the unit elevated on a table, turn unit ON and press flex hose trigger until water dispenses onto the mat on the floor.

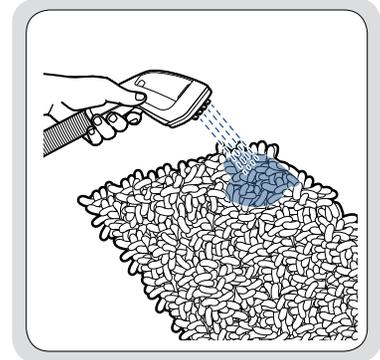

6. Hold tool right side up and add BISSELL No-Rinse Dog Shampoo to the shampoo reservoir.

7. Hold the tool horizontally on a flat surface (such as table or counter top) and attach it to the cleaner by inserting the flex hose connector into the shampoo tool connector. You will hear a “click” when it locks in place.

8. Set Rinse/Shampoo switch to desired setting. For Shampoo, the reservoir will dispense a mixture of shampoo and water; for Rinse, it will dispense just water.

9. With the base unit and reservoir on a table, extend the hose and nozzle to the mat or towel on floor and spray trigger until solution dispenses.

Noise-Sensitive or Anxious Dog?

Some dogs are sensitive to loud noises, or are not fans of vacuums or other loud appliances. Here are some quick training tips to help your dog have a great experience with this new bathing method.

For more tips and videos, visit us online at www.BISSELL.com/videos.

Training Steps - Phase 1

- Place the unit where you plan to bathe your dog. With the unit turned off, allow the dog to become familiar with it.
- With the unit turned off, have the dog walk over to the unit and use the spray nozzle as a "comb" to brush the dog.
- Praise your dog and offer a treat.

Phase 2

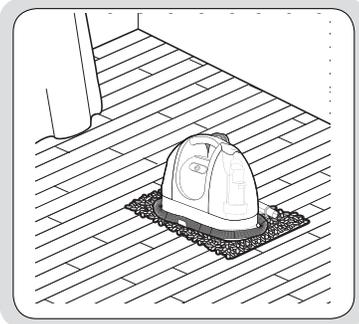

- With the dog out of the room, turn the unit on. Leave the unit on and offer your dog a treat.
- Turn the unit off.
- Repeat the last two steps of phase 1.

Phase 3

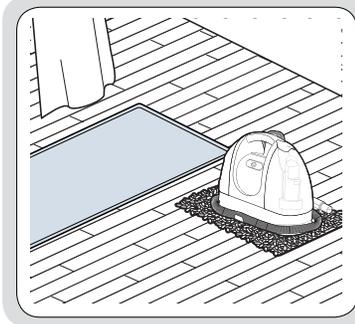

- Turn the unit on, have your dog enter the room and give the dog a treat.
- With the unit on, and without pulling the trigger to release water, "comb" your dog's fur with the bathing tool.
- Turn the unit off and offer a treat.

Phase 4

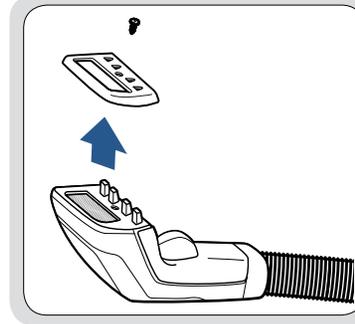

- Turn the unit on and have your dog enter the room.
- Comb a small section of your dog's fur with the unit on and pull the trigger in quick, short bursts to acclimate your pet to feeling the solution on their skin.
- Once your dog is comfortable with the unit, you're now ready to enjoy bathing your dog with the BARKBATH.

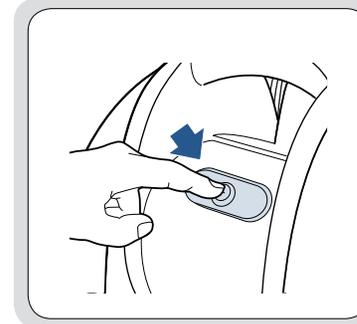

1. Place the base unit on the microfiber mat to help dampen the sound for your pet.

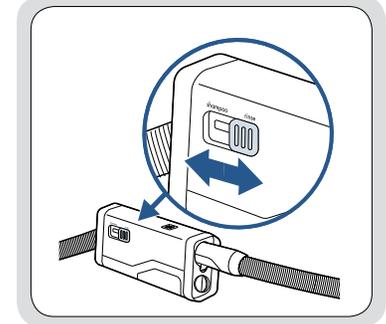

2. Lay down a separate blanket or towel in the area, placing it at least 4 feet away from the BARKBATH to help reduce sound.

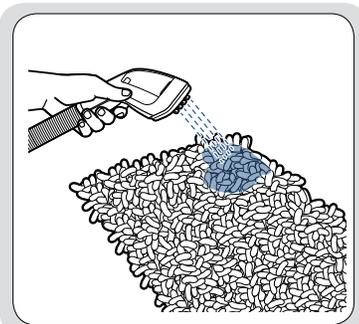

3. OPTIONAL: Remove the screw on the plate of the bathing tool to expose longer nozzles for use on thick or longer coated dogs.

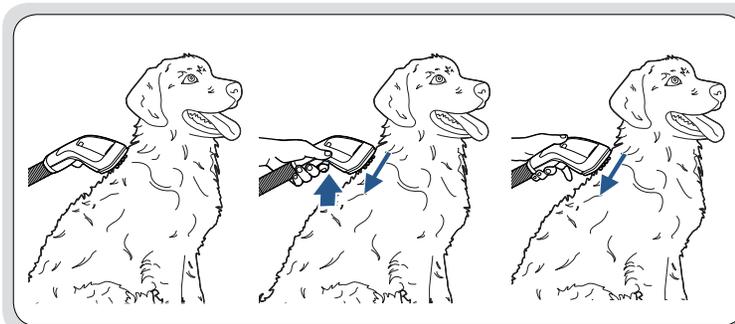

4. Plug in the unit and press the power switch to ON (|) position.

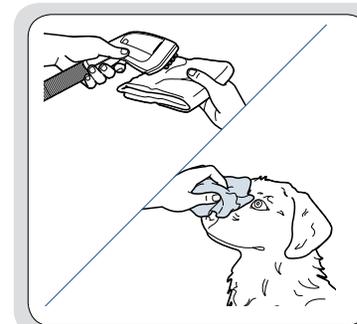

5. Set the Rinse/Shampoo switch to the desired setting. Shampoo will dispense shampoo and water. Rinse will dispense just water.

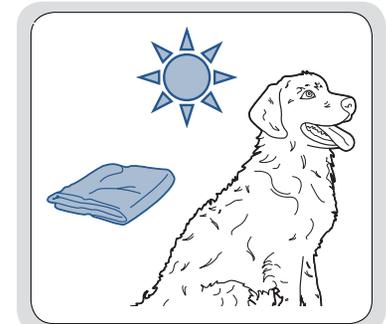

6. Test the system by pointing the nozzle at the microfiber mat and pressing and holding the spray trigger until solution dispenses.

7. Place the spray nozzles flush against the dog's body before pressing the spray trigger. When ready, press and hold the spray trigger to release the shampoo/water and use the nozzles to brush the bathing tool down along the fall of the dog's fur. Release the spray trigger and use "drying strokes" to suction up moisture from the dog's coat. Repeat as needed.

8. Spray shampoo/water on the microfiber towel and hand clean delicate areas such as the dog's face and paws.

9. As a final step, coat should be air- or towel-dried as needed.
