Switch Off: Touch again to turn off the night light

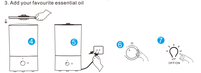

Auto Shut-off

When the humidifier runs out of water, it would stop producing mist and the indicator light turns red.

## GETTING STARTED

1. Remove the tank lid
2. Fill the tank with clean and cool water only
3. Add your favourite essential oil

4. Attach the tank lid
5. Plug in the humidifier
6. Rotate the control knob clockwise to turn it on.
7. Touch on to turn on/off the night light.

## CAUTION

1. Don't add water directly into the base chamber
2. Don't add water through the mist tube

## CARE & MAINTENANCE

- To keep your humidifier running efficiently, clean it regularly. Every 3 days cleaning is recommended. All maintenance should be done in the kitchen or bathroom on a water-resistant surface near a faucet.
- In some areas, tap water is richer in minerals. The humidifier won't instantly go haywire if you do use tap water, but in the long term, this may cause scale, pink mold, and other issues. To avoid this, we recommend using distilled water. Distilled or purified water is the best option to keep your machine running at optimum performance.
- Change the water daily to avoid bacteria growth.

## CAUTION

1. Never immerse the humidifier base in water
2. Make sure water doesn't enter the base through the air outlet and air inlet

## CAUTION

1. Turn off and unplug the humidifier
2. Remove the water tank from the base and remove the tank lid
3. Drain water from the water tank and base

4. Fill the water tank halfway, add one to two cups of undiluted distilled white vinegar.
5. Attach the tank lid and shake the tank for 20 seconds
6. Place the tank on the base, the vinegar solution will enter the base chamber to loosen mineral buildup (scale) on the atomizer and the bottom of the water tank.
7. Soak for 25-30 minutes.

8. Rinse all parts until any vinegar smell is completely gone.
9. Dry all parts with a cloth. Make sure all parts are completely dry before reassembling or storing.

## CAUTION

| Problem | Possible Solution |
|---|---|
| Humidifier makes a loud or unusual noise | Make sure the water tank is properly in place |
| | Set mist level to a lower setting |
| | The humidifier may be malfunctioning. Stop using the humidifier and contact us (support@junichy.com) |
| White dust appears around the humidifier. | Empty the base chamber. Refill the water tank (not the base chamber) and place the water tank properly onto the base. |
| | We recommend using purified or distilled water to fill the humidifier. Avoid using water with high mineral content. |
| | Clean the humidifier |
| Water leaks from the humidifier. | Make sure the water tank is properly in place |
| | The humidifier may be malfunctioning. Stop using the humidifier and contact us (support@junichy.com) |
| Condensation forms around humidifier or windows. | Humidity may be too high. Turn down the mist level, turn off the humidifier, or open a door or window to the room. |
| Mold grows inside the humidifier. | Clean the water tank and inner chamber regularly |
| Indicator is red. | Fill the water tank. |
| | Place the water tank properly on the base. |
| Essential oils have little or no smell | Add more essential oils. For best results, use pure essential oils. |
