Packing List

Smart watch

Charging cable

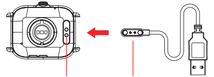
Quick start guide

Appearance Description

Schematic Diagram of Charging

To ensure proper charging, please follow these instructions carefully:

1. Use the magnetic charging cable that is specifically designed for this product to charge the watch. Align the charging contacts on the back of the watch with those on the cable.
2. Use an adapter with an input voltage of 5V/1A or5V/2A. Charging with the car charger is not allowed (the voltage in the car become sunstable when starting or stopping the engine).
3. If the watch is out of power, please activate it by charging it first. The watch screen will only light up after about 5 minutes of normal charging.



Introduction to Smart Watch Function

① Brightness Adjustment
② Time Display
③ Music Control
④ Do Not Disturb Switch
⑤ Master Dial Switch
⑥ Bluetooth Talk Switch
⑦ Settings
⑧ Version Information
⑨ Finding Your Phone
⑩ Split screen function

Main Interface: The main interface displays the current time, date, steps, and other information. Press and hold the main interface to switch between different watch faces, and click to confirm.

Call Function: Open the phone settings -Bluetooth - search connection Bluetooth LSW3. You can use the watch to make/receive calls or play mobile music by connecting your phone to the watch through Bluetooth.

Steps: Display current steps, distance and calories of the watch.

Heart Rate: Slide to this page and keep a while and automatically measure the current real-time dynamic heart rate. Connectable to APP to set real-time monitoring and view data records.

Blood Oxygen: Slide to this page and keep a while and automatically measure the current blood oxygen data and vibrate to indicate the result.

Exercise: Click on the icon on the main interface to access multiple sport modes. Choose a sport mode and click on the icon to start. Slide right to pause or stop the sport.

Sleep: The smart watch can record and display your sleep time from the previous night, including the time spent in deep sleep and light sleep. More detailed sleep data can be viewed synchronously in the app.

Weather: The watch can display the local weather conditions, To use this function, connect the watch to the synchronization app and ensure that the phone's GPS is turned on and the app has the necessary permissions.

Message: The watch is capable of receiving phone calls, as well as notifications from popular messaging and social media apps like WhatsApp, Facebook, Twitter, Line, Instagram, Telegram, Messenger, Skype, Reddit, Snapchat, GmailLetc, To enable these notifications, you simply need to set the alert preferences and turn on the corresponding push switch within the accompanying mobile app, Please note that in order for this function to work, the watch must remain connected to your phone, and you must grant the appropriate permissions to the app.

Music: After connecting the app, the watch can control the mobile phone's music player to play/pause/switch to the previous or next song, This function requires the app to be opened on the phone before it can be controlled on the watch, The watch needs to stay connected to the phone and have the necessary permissions for notification push.

Stopwatch: Click on the icon to start the function. Click on start to begin timing, pause or reset, Slide right to exit.

Search: Click on this icon and your phone will beep to indicate its location, This function requires the phone to be connected to the watch app. No alert will be received on the phone if it is on silent mode.

Settings: Click on the icon to enter the function, From there, you can set the menu style, screen display language, time, restore factory settings, and view information about the watch.

Watch APP Installation and Connection Instructions

To fully utilize the functions of this Bluetooth smartwatch, it is necessary to connect it to a special mobile phone application (APP). This includes features like time display, call alert, and message alert, For Android phones, it is important not to use Bluetooth to directly connect and pair with the watch,Please scan the following QR code to select the version suitable for your mobile phone system or enter main application markets to download and install FitCloudPro.

Device Connection

Before using the APP, make sure to turn on the mobile phone's Bluetooth and GPS positioning to obtain the necessary mobile phone positioning permission,After the connection is successful, it will prompt to pair with LSW3," please select pairing.

The watch connection operates as follows:

Open the APP and make settings according to the prompt

↓

Click [Select Device] to search

↓

Select the name of the searched Bluetooth LSW3

↓

Connection succeeded

Notes:

1,For Android users, it is important to allow the APP to obtain necessary permissions and to run in the background to ensure the best user experience.

2,For users with mobile phone systems that are below iPhone iOS 13, it is necessary to connect to the LSW3 for a second time in the Bluetooth settings of the mobile phone after successfully connecting in the APP. This will enable functions such as making calls, playing multimedia music, and more.

Important Warnings

Please read the instruction manual carefully to ensure your safety and proper use of this product.

1, If you experience any discomfort or skin irritation on your wrist while using this product, please discontinue use and consult a doctor immediately.

2, The data provided by this watch is intended for general fitness and wellness purposes only, and should not be used for medical purposes. We are not responsible for any consequences resulting from inaccurate readings.

3, Do not use this device in hot water, saunas, or sea water, or in environments with extreme temperature variations. Avoid long-term swimming and do not operate the buttons while in water.

4, Do not expose your device to liquid, moisture, humidity or rain while charging, and do not charge your device when it is wet, as this may result in electrical shock or injury.

5, If any part of your product needs to be replaced, including normal wear and tear or breakage, please contact us via Xbboha-amazon@foxmail.com.

Please follow these guidelines to ensure that you can safely use your device and maximize its effectiveness.

FAQ

1,If you're having trouble finding your watch on the app or syncing it with your phone's time, try the following

Answer:

A, Make sure your phone's Bluetooth and GPS positioning are turned on before using the watch for the first time.

B, Open the app and grant it permission to access your phone's location (go to Phone Settings -> Applications).

C, If the watch is already paired with a Bluetooth connection on your phone, cancel the pairing and then search for the connection again on the app.

D, If the watch hasn't been used in a while, the Bluetooth may be in a dormant state. Turn off both the watch and phone's Bluetooth, wait about a minute, and then try searching and connecting on the app again.

E, Make sure the watch is connected to the app, otherwise functions like step tracking, sleep monitoring, and time synchronization may not work properly.

2,If you're experiencing a lack of alert functions on your watch, try the following steps:

Answer: For first time use:

For Android users: Follow the on-screen instructions, or enable the information reminder function in the app and grant notification permission when prompted.

For Apple users: Once the watch is connected to the app, a pairing request will pop up on the phone. Choose to allow pairing and turn on the switch for the application reminder that you want to use in the app, Also, make sure to open the "Notification Center" for the desired app in your phone's settings

3,The reminder switch is turned on, but there are no reminders on the watch, or the reminders are sporadic.

Answer:

If the phone has turned on message notifications and the corresponding notification permission according to the above tips, the Bluetooth is on, and the app and watch are connected, but the system-whitelisted app alert function is not working, the user needs to check the message push function again.

4,The Bluetooth connection on Android phones often disconnects or there are no message alerts after a period of connection.

Answer: Android will periodically clean up the phone's background applications or applications that consume more power for smooth system operation, If the app is not set to allow background running, it will be easily cleaned by the system and the Bluetooth will drop out., Different Android phones have different methods for app background running settings. For example, in the Huawei Nova 8 SE: go to Settings > Battery > Power Consumption Ranking > App > Application Launch Management > Manually manage to turn on background running.

5,The watch cannot measure, or the data is not accurate.

Answer:

A, Sit down before taking the measurement and put your body in a relaxed state with your arms level with your chest.

B, Adjust the tightness of the watch, The back of the watch should be close to the skin to prevent light leakage from the photoelectric sensor.

C, Keep your body calm during the measurement, Talking, coughing, sneezing, and other movements will affect the accuracy of the measurement results.
