

User Manual for Jeecoo USB-Headphones

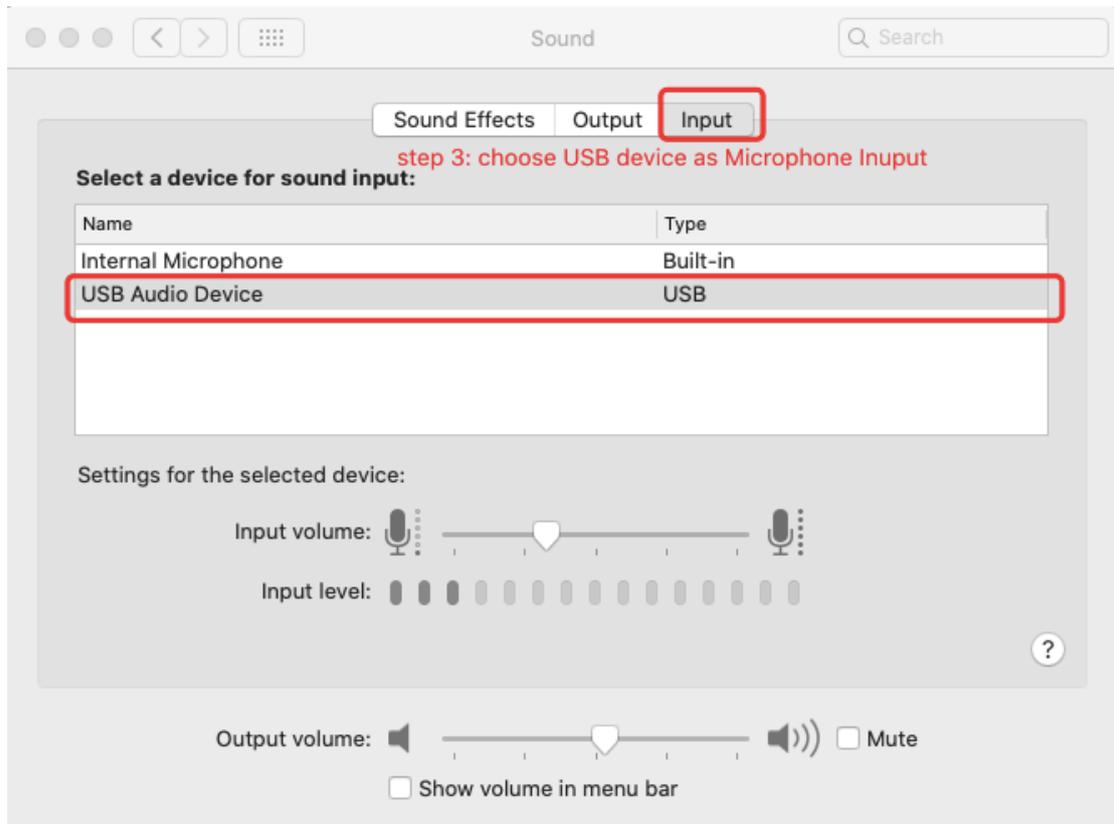

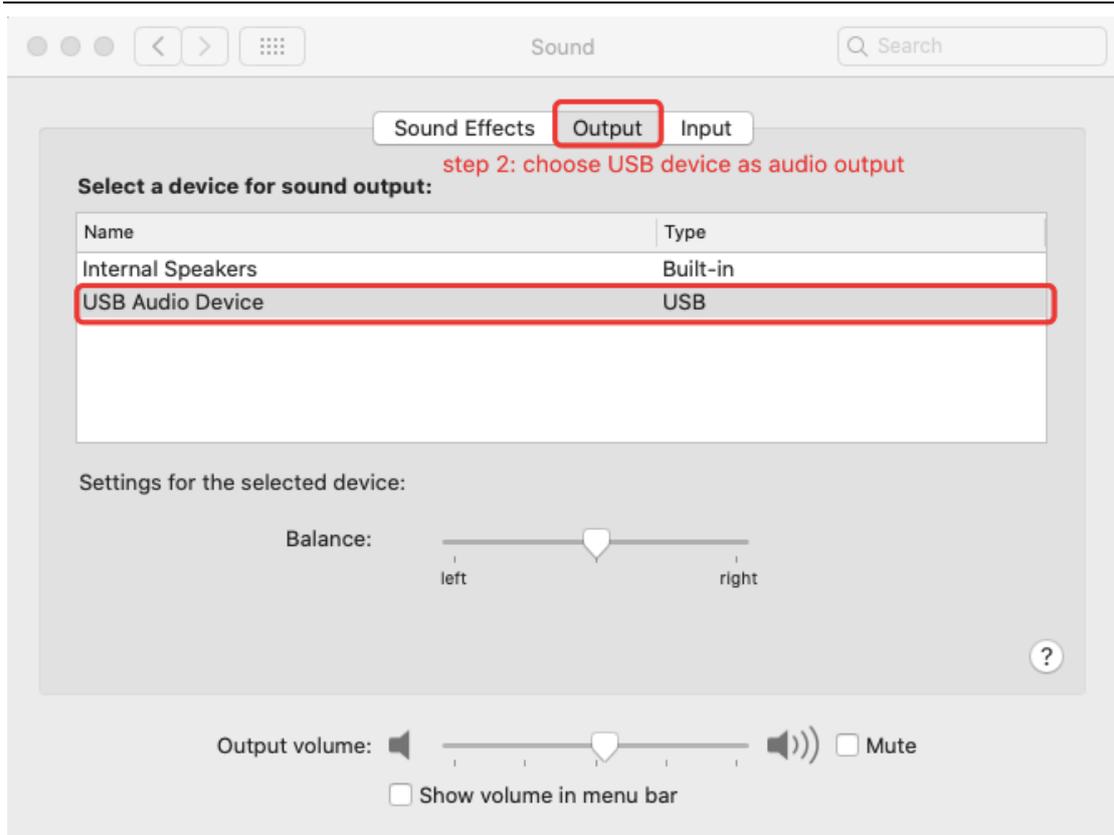

★ *To work with Windows PC/laptop/devices:*

Plug & play: connect the headset onto your devices, fix the sound settings, and it works. No need driver/software.

★ *To work with Macbook devices:*

Connect the headset onto USB ports on Macbook;
Run the "System Preferences" to change sound settings;
Choose the USB device as audio output and Mic input.

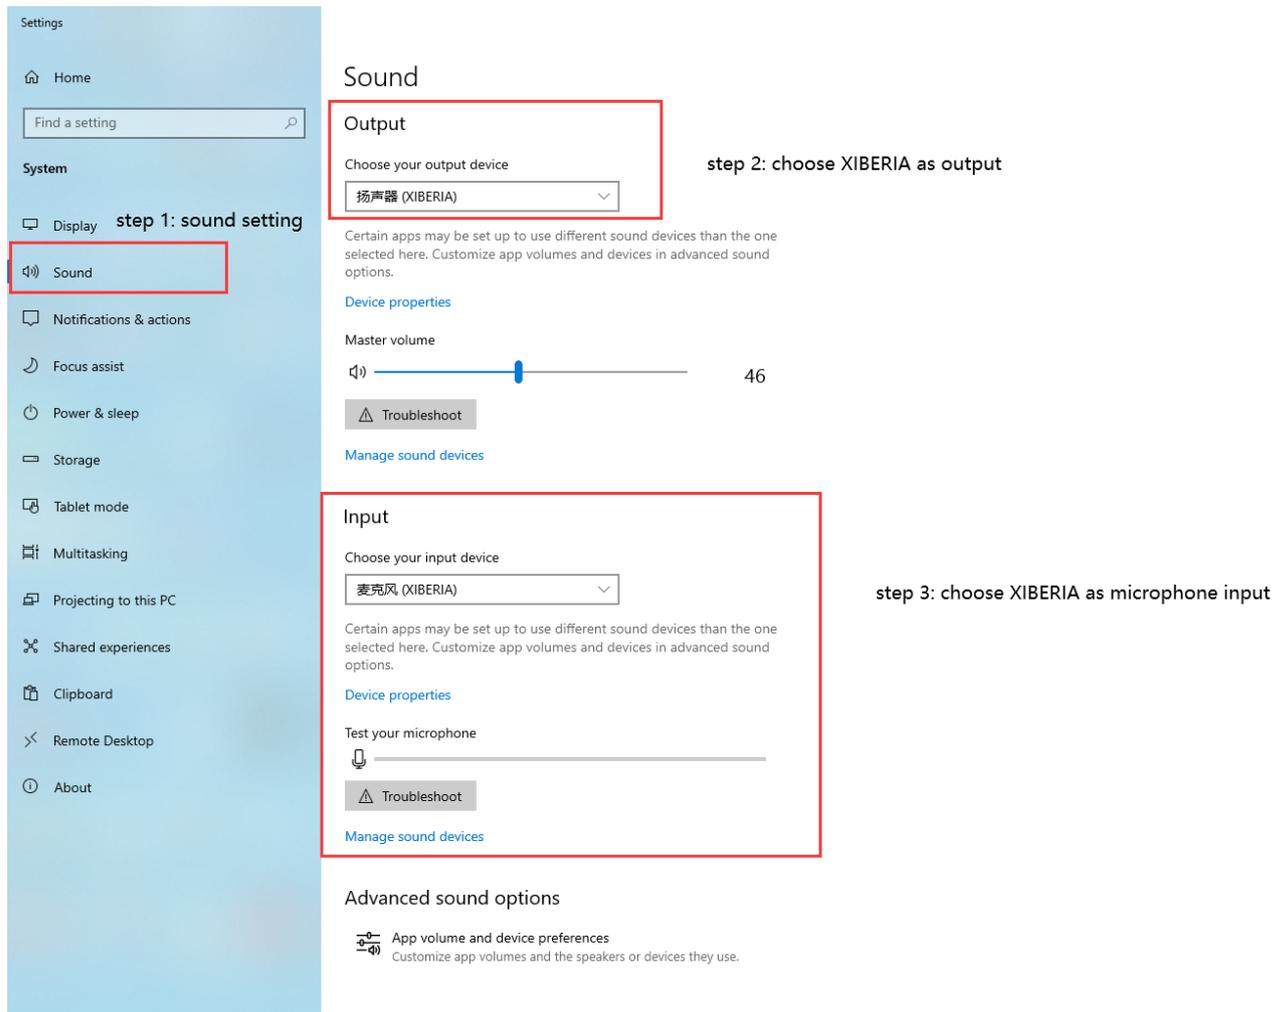

★ To work with Windows 7/8/10 devices:

Connect the headset onto USB ports on Windows devices;

Run the "System Settings" to change sound settings;

Choose XIBERIA as audio output and Microphone input.

The screenshot displays the Windows Settings application with the 'Sound' settings page open. The left sidebar shows 'Sound' selected under the 'System' category. The main content area is divided into 'Output' and 'Input' sections. In the 'Output' section, the 'Choose your output device' dropdown menu is set to '扬声器 (XIBERIA)'. In the 'Input' section, the 'Choose your input device' dropdown menu is set to '麦克风 (XIBERIA)'. The 'Master volume' slider is positioned at 46. Below the 'Input' section, there is a 'Test your microphone' section with a 'Troubleshoot' button. At the bottom, the 'Advanced sound options' section is visible, with 'App volume and device preferences' selected.

step 1: sound setting

step 2: choose XIBERIA as output

step 3: choose XIBERIA as microphone input

Advanced sound options

- App volume and device preferences
Customize app volumes and the speakers or devices they use.

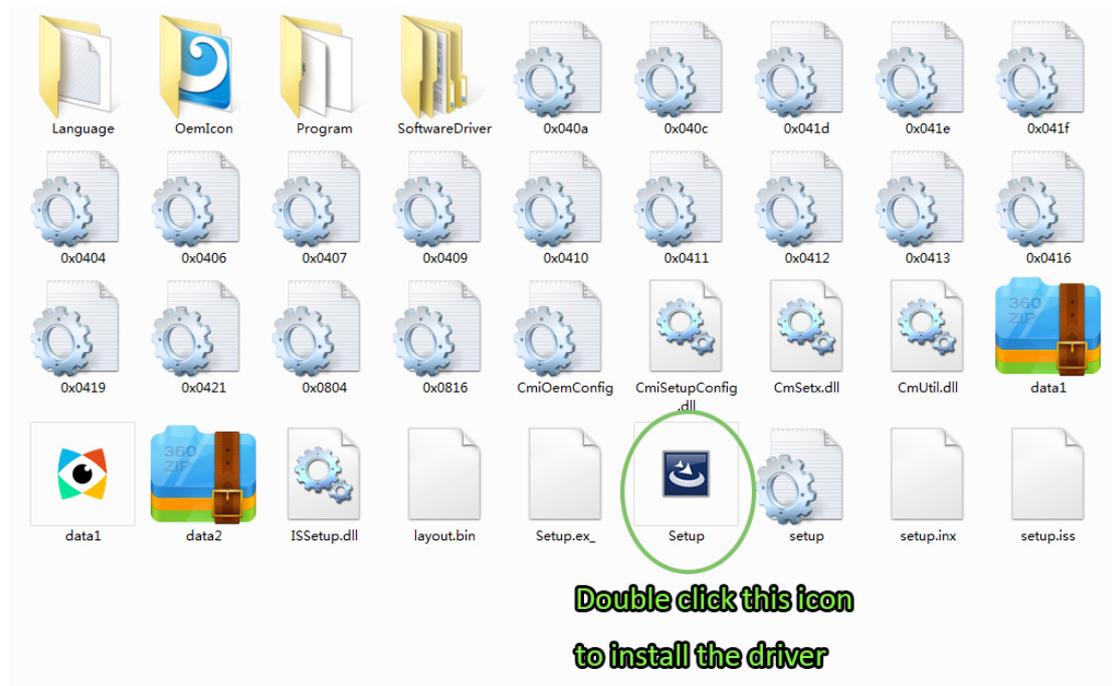

★ How to use the extra software to get more features?

Note: the 7.1 surround sound software only available on Windows 7/8/10 devices.

1. Please visit Jeecoo website (below link) to download the software driver, and choose the correct one with your Windows version:

www.jeecoo.com

2. Download and install the driver into your computers:

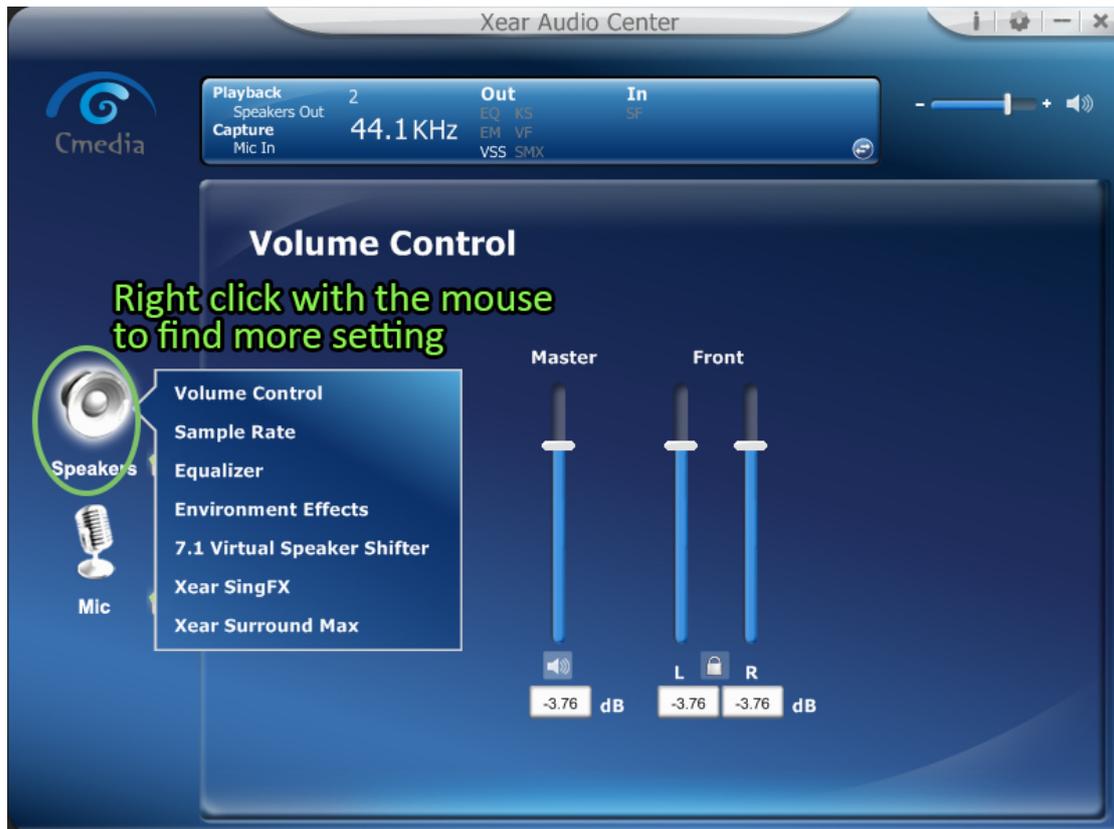

3. After the installation, you'll find this icon on your desktop

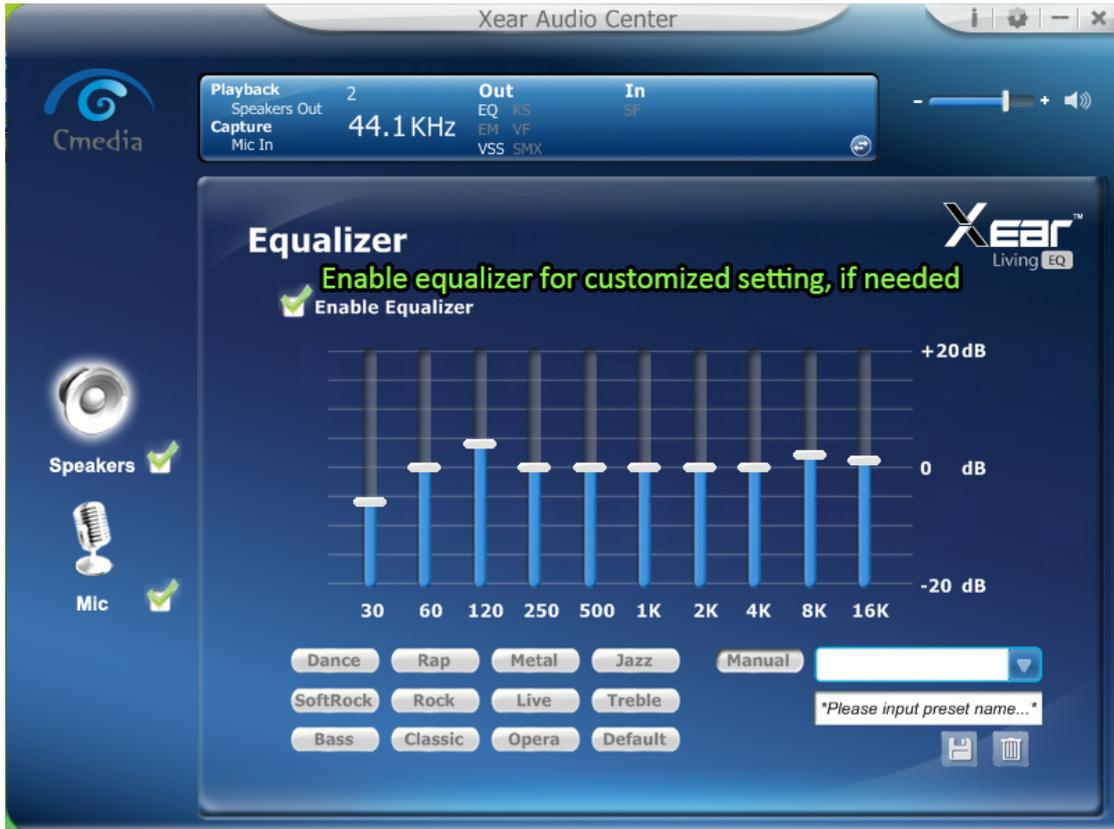

4. Double click the icon, to run the software:

(make sure the headset is connected with your computer when running the software)
