

SafePro X Installation & User Manual

Your SafePro X Set Includes:
2x SafePro X emergency tool

Each with:
2x Protective caps (one on each end—for safety during storage)
1x Test glass so you can safely try it out
1x Mountable holder with 3M adhesive for easy attachment inside your car
1x Leather loop for keyring or hook attachment

How to Use the Tool:

To break a car window in an emergency:

1. Remove the cap on the pointed end to uncover the glass breaker.

2. Press that black tip firmly into the corner of a side window (not the front windshield).

3. It's spring-loaded—so with one strong push, the glass will shatter instantly.

To cut a seatbelt:

1. Take off the cap covering the seatbelt cutter slot.

2. Slide the seat belt into the slot and pull the tool—no strength needed.

3. Delivers a clean, complete cut with ease.

Test It Yourself:

We've included a piece of real car safety glass so you can test how the tool works at home. It gives peace of mind knowing what to expect if you ever need it.

Mounting and Storage:

The holder has a **3M adhesive strip**—just peel and stick it inside your car (glove box, door side, or center console).

The **leather loop** lets you attach it to your keys or a bag, so it's always within reach.
