

DELAMU

Cord Hider Installation Guide

Keep Your Life Neat and Tidy

Contact us

Delamu has been committed to providing a wide variety of cable management solutions to cater to the needs of customers. From on-wall cable raceways to under-desk cable organizers, we are sure you'll find a solution that fits your home or office application. We are also constantly updating our product lines to include new ideas for organizing cables and wires.

Delamu works very closely with trusted partners to deliver high-quality products at affordable prices. Together we put more efforts and resources in production, from sourcing good raw materials and private molding to implementing strict quality control programs. So that we can keep our commitment to meet your satisfaction. To find more cable management options, please visit our online store on Amazon.

We'll provide a refund or replacement at your choice for any product with defects in material or workmanship. Please feel free to reach out with questions, concerns, or advice.

Made in China

Install with Tape

1 Plan the Route

Plan the route of raceway for your cables and learn which connectors are needed to handle the turn, corner, or joint. Refer to the image on the right to determine the accurate spacing of each connector.

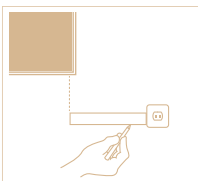

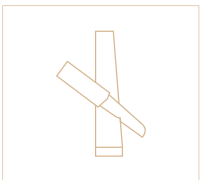

2 Measure the Distance

Measure the distance and determine the length required of the raceway channel. Use a pencil to mark the exact spot where you are going to mount the cable raceway.

3 Cut the Channel

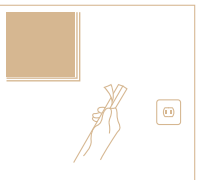

Cut the channel with a hand saw downward smoothly and evenly based on the length required and the spot marked.

4 Mark the Ends

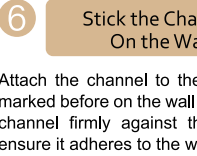

Place the raceway against the wall, and use a pencil to mark both ends of the raceway on the wall. Use a level as a guide to make sure the raceway is straight.

Install with Tape

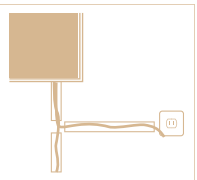

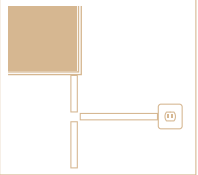

5 Apply the Tape

Slide off the channel cover and cut the tape of the right length, then peel off the protective film on the tape and apply the adhesive tape to the back of the channel.

6 Stick the Channel On the Wall

Attach the channel to the place as marked before on the wall. Press the channel firmly against the wall to ensure it adheres to the wall snugly.

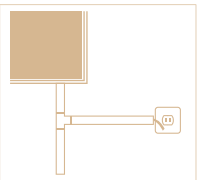

7 Put into the Cables

Place the cables neatly inside the channel, and make sure the cables aren't twisted or overlapping.

8 Put on the Channel Cover & Appropriate Connectors

Put the channel cover on by sliding it until the installation is finished. Then, snap on the appropriate connectors into place.

Warning

1. Not to be used to extend hard-wired (permanent) electrical wiring.
2. Do not loop the cable and wires.
3. Not suitable for uneven surfaces.
4. Be careful of the edges at raceway ends in case of accidental cuts when handling it.
5. Our tape is very sticky and it is best to plan your route before installing the raceway to prevent damage to the wall when removing the tape for installation.
6. If you must remove the tape for some reason, peel it off slowly (or use a knife to gently assist in removing the tape).
