9. Avoid ultraviolet radiation During treament, apply sunscreen to avoid damage from direct sun light
10. During use，do not block the air inlet or cooling holes to avoid over-heating.
11. If the product case is damaged or inadvertently immersed in water, Stop using immediately and contact customer service to inquire about repairs.
12. No one should open the the machine case except to authorized company personnel, otherwise there is a risk of electric shock. Non-professionals are prohibited from performing repairs.

Working Principle

1.Depilator Introduction

IPL depilation is used to remove excess hair and permanently reduce hair growth. When performed 1-3 times every week, hair can be effectively removed after 8-12 weeks. Hair can be removed from the following parts of the body: face (below cheek-bones only), underarms, arms, legs, bikini line, etc.

2.The Operation Theory of Depilator

The IPL depilator is a personal care appliance, and caution should be exercised during usage. Please read this user manual carefully before using the laser depilator for the first time.

This product removes hairs by heating both the hairs and the roots under the skin.

The pulse light emitted by the depilator is absorbed by the melanin contained in the hairs and roots. More light will be absorbed the darker the hair color is, which will then cause the hairs to go into a dormant state.

Hair will fall off naturally during the process. This typically takes one to two weeks to occur, and new hair growth will also be inhibited.

Ideal hair removal results cannot be achieved with just one treatment, as optical hair removal is only effective inhibiting hair growth in the long-term. During the treatment process, the hair in the treatment area will typically be in different

stages of growth.in order to effectively remove hair, you must undergo treatment once a week for several weeks. The built-in optical filer prevents ultraviolet rays from entering the skin, ensuring that the product does not harm the skin

3.IPL Depilator Treatment Plan

Treatment plan and effects

A normal, complete hair growth cycle can take 18-24 months. During this time, IPL epilator treatment may be required multiple times to achieve reduced or permanent hair loss. The effect of hair removal varies from person to person and depends on the body, the color of the hair, and how the IPL hair removal device is used.

Purifying Skin in 8 Weeks

Depending on hair growth, hair loss can be achieved in 8 weeks.

2-3 times a week for weeks 1-3	2 times a week for weeks 4-5	Once a week for weeks 6-7	Successful depilation after 8 weeks
Hair begins to fall off naturally and is greatly reduced.	Long-term hair loss and inhibited growth, while tender skin is maintained!	Hair becomes thinner, no longer regrows, and skin is kept smooth and tender!	Depending on hair growth, selective treatment can be used, and you can say goodbye to repeated hair removal!

Product introduction

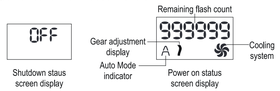
Product net weight	252G
Energy level setting	5 Levels
Model of use	Connect to power supply
Specifications	Input AC100-240V output DC12V 3A
Warranty period	3 Years

How to use

1.Guidance For Product Use

Power on: After connecting to a power source, press the power button for 2 seconds to turn on.

Shut down: While the device is powered on, press the power button for 2 seconds to shut down.



Energy Level Adjustment: While the device is powered on, quickly press the key to select the 5 levels settings. The screen will display those five levels as shown below (the default is 1st level setting, and can be adjusted as needed)

2. Choose the Correct Light Intensity:

The device has 5 different energy intensity levels. You can choose the right level setting based on your skin type and the level of energy intensity you feel comfortable with. Please refer to the table below to select the appropriate setting.

Skin type	Skin color	Energy Intensity Level Setting
I	White; extremely easily sunburnt, no sunburn.	4/5
II	Yellow; easily sunburnt, slight sunburn	4/5
III	Light brown; easily sunburnt, skin tone has become light brown	4/5
IV	Brown; rarely sunburn	3/4
V	brown, very ideal conditions for sunburn	1/2/3
VI	Dark brown or darker; almost never sunburn, very dark skin	The device is not suitable for you

Treatment Modes

Depending on the area you wish to treat you can choose between **Auto Mode**(Gliding mode) and **Manual Mode**(Precision mode). Auto Mode enables fast and efficient treatments and is recommended for large skin surface areas (e.g. legs, arms, chest and back) while Manual mode is recommended for treating sensitive or small, hard-to reach areas such as knees, shins, ankles, bikini line or underarm and face for females.

3. Begin Your Treatment

Step 1: Preparing the treatment area

Remove all visible hair on the skin before using the device. You may use your preferred hair removal method. Ensure there is no hair remaining above the surface of the skin as this may cause treatment discomfort. Remove any cosmetics, lotions and cream from the area you wish to treat. Cleanse the treatment area and pat dry.

Step 2: Doing a test patch

Before your first treatment on each new body area, we RECOMMEND you test your skin (in that area) for reactions. The patch test area should be approximately 3 cm x 2 cm in size (equivalent to 2 flashes applied to the skin side by side). Follow Step 3-6 to treat the area. Wait 24 hours following the patch test, to ensure your skin

is suitable for treatment and there is no adverse reaction to the light energy. If there is no reaction after 24 hours, you may treat the area around the test patch. The 'patch tested area 'should not be re-treated for at least one week.

Step 3. Wear the eye protection goggles

Step 4. Power on

Plug the power cord into the socket of the device and connect to the power supply. Press the **power button** ⑥ for 2 seconds to turn on the device. When the machine is powered on, the working sound of the built-in fan will be heard and all function icons on the LCD display will illuminate.

Step 5. Treating with XSOUL IPL Hair Removal

1. Press the **flash window** ① 90 degree firmly against the area to be treated, ensuring it is in contact with skin. To protect your eyes, the device will not activate(flash) when it is not in good contact with your skin. The **'Ready to flash 'Indicator** ⑧ should be flashing green.

2. Short press the **power button** ⑥ to adjust the energy levels. The default setting is level 1, you can adjust the energy level according to your skin color. (NOTE: For a better treatment result, it is recommended to start from level 3)

3. Manual Mode:

When turned on, the device will starts from manual mode by default. Press and instantly release the **flash button** ③ The device will emit a flash. Lift off the device and place it onto the next adjacent spot to be treated. Wait for the **'Ready to flash 'Indicator** ⑧ to flash green again. Then press and release the flash button.

Continue treatment spot by spot until you have completed the entire area you wish to treat.

4. Auto Mode:

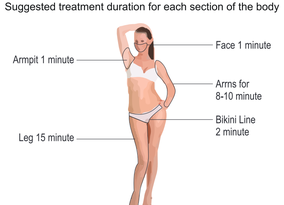
Hold the **flash button** ③ against the skin for about 3-5 seconds, the device will switch from Manual mode to Auto Mode. When the flash window is attached to the skin, it will automatically flash. Move the device slowly and continuously from the bottom to the top of the treatment area to avoid missing areas. Make sure to always keep full skin contact so that the device flashes continuously. **Short Press the flash button** ③ to switch from Auto mode to Manual mode.

Step 6: Switching Off the Device

When the treatment is finished, press the power button⑥ for 2 seconds to turn it off. Unplug the device from the power supply, and the electrical outlet.

4.IPL Depilator Reference Times

Suggested treatment duration for each section of the body



After-Treatment Tips

1.Precautions After Treatment

Do not use cosmetics that contain alcohol after depilation.

Do not expose treated skin areas to hot water above 50°C after hair removal

Do not exercise vigorously after hair removal, as strenuous exercise can cause sweating which can irritate treated areas

Do not expose treated areas to direct sunlight after hair removal

2. Stress Response of Skin After Hair Removal

Due to different sensitivities of every individual's skin, some people may have redness on the hair removal site, red sports on the skin surface, or a slight tingling sensation while using the device. These are all normal stress reactions of the skin and usually disappear within 24 hours after the end of hair removal without any further effects. Shaving hair and pulsed light therapy may make the skin dry and/or itchy. You can use ice water, a towel that has been soaked in ice water, a cold compress, and may also moisturize. If the skin is still dry, you can stop treatment for 24 hours. Afterwards, apply fragrances-free moisturizer to the treatment area. If the above symptoms do not disappear within 2-3 days, please consul a doctor as soon as possible. If you experience intense pain during or after use, if the skin is keratinized, red, swollen, burned, or abnormal in any other way, stop treatment immediately and consult a doctor.

3.Care After Using IPL Depilator Skin Care

1. It is recommended to avoid contact with water within 6 hours after light operation, after 6 hours, the treated area can be moisturized.
2. After the treament, you may apply cream, body lotion, and moisturizer to the treatment area. If the skin is tinging, red, or swollen after application, please wait until these conditions have disappeared completely before applying any further products on

the skin. If the skin tingles after application, wash it off with water.
3.Do not use perfume, facial masks, or cosmetics which cosmetics which contain cellulose beads after light treatment.
4.Avoid direct UV exposure within 48 hours after light operation. Apply sunscreen if necessary.
5.If you feel unwell, visit to your doctor.
6.Sunbathing may cause darkening or burning of the skin, which can cause redness, inflammation, and similar adverse effects. Therefore, do not use this product while exposed to direct sunlight and do not use within 1 week of being sun burnt.
7.Do not expose the skin to direct sunlight within 48 hours after using the depilator. If the skin is exposed to direct sunlight with 48 hours, please be cautious and watch out for any adverse skin reactions. Apply sunscreen for 72 hours after treatment.
8.Do not use artificial tanning spray during light treatment.
9. Consult a physician if you need to perform plastic surgery after illumination (only applicable for areas that have been treated).

Clean and Care

1. It is recommend to clean the machine after each use to ensure the lifespan of it.
2. DO NOT wash the machine or its accessories under the faucet or in the dishing machine.
3. DO NOT use the abrasive cleansers(toothpaste, etc.), steel clean ball or corrosive liquid(petrol, oil, acetone etc.) to clean the machine.
4. Please wipe the flashlight screen gently when cleaning.
