Image Standards
Every product on Amazon needs one or more product images. Choose images that are clear, straightforward and easy to understand. They must accurately represent the product and be information-rich and attractively presented. Show only the product that is being offered for sale, with minimal or no propping. Text, logos and inset images are not allowed. Whenever possible, provide several images, with each one showing different angles and details of the product. This is your opportunity to show your product to your customer, so quality matters.
We reserve the right to reject images that do not meet our image standards.
It is your responsibility to ensure that you have all the necessary rights to the images you submit.
MAIN Images
*The background for a MAIN image must be pure white (pure white blends in with the Amazon search and item detail pages, which have RGB values of 255, 255, 255).
*A MAIN image must not be a graphic or illustration and must not contain accessories that are not being dispatched with the product, props that may confuse the customer, text that is not part of the product or any logos, watermarks or inset images.
*The product must fill 85% or more of the image.
Additional Images
*MAIN images should be supplemented with additional images showing different sides of a product, the product in use or details that are not visible in the MAIN image. For media products, this could include the back cover, sample pages or screenshots. You can add up to eight (8) images.
*A white background is recommended, but not required. Additional images may not include logos or watermarks and all props or accessories must be presented in a way that will not cause customer confusion.
Image Size
Images should be 1000 pixels or more in either height or width as this will enable the zoom function on the website (zoom has been proven to enhance sales). Files measuring less than 500 pixels on the longest side will be rejected by our system.
Naming and formatting
*Amazon accepts JPEG (.jpg), TIFF (.tif) or GIF (.gif) file formats (JPEG files are preferred as they are smaller in size and can therefore be processed and uploaded more quickly).

*A suggested way to name an image file is to save the image on your web server using the product SKU as the file name followed by the view type or variant code--MAIN, PT01-PT08 (additional images), SWCH (usually a colour swatch only used on products with more than one variation). Examples: 8845013515.MAIN.jpg, 8845013515.PT01.jpg, 8845013515.SWCH.jpg

Uploading your Image files

You have two options to upload your image files:
(1) Once you have named each image file and saved them to your drive folder, please compress the folder into a zip file. Submit the template without image attributes filled to create the offers on Amazon. Use the Processing

In addition to this Example tab, please read the

Detailed descriptions of examples in row.	**Product Identity**
	Item Type Name
	item_type_name#1.va
Example 1: This is an example of a single product with only one size and no variations. The product is by default a 'child' with no 'parent' (sometimes called an 'orphan').	facial-cleansing-pads
Note: Column headers in bold indicate the data is required. Note: The product_tax_code#1.value for every product offered by an Amazon seller is A_GEN_NOTAX. This is a default value, so if you do not enter it, it will automatically be entered by Amazon.com.	Body-fat-monitors

Example 2: This is an example of a 'parent' with two 'children'. The parent (the one listed in the first row of this example) is **not** a sellable product; it is a description of a set of products. Note: **don't enter a size, colour, count, type, parent SKU, relationship type or quantity for the parent product, but do enter an image URL.** Do not enter data such as price, time-to-ship, weight, etc., for the parent product since these are overridden by the child product data. Be sure to put the price, weight, size, etc., in the child products since this will be different for each. Also note that the bullet points and description are needed for each child product but not for the parent product since parent products do not appear on the site.	facial-cleansing-pads

Note that this example only has child main_product_image_locator#1.media_location, not swatch_product_image_locator#1.media_location. In this case, the variation names will be shown and will have a link, but no swatch images will show up next to that link.	nutrition-bars

Example 3: This is an example of an accessory relationship between 2 products. In this case, the 'parent' is a buyable product; any product information for it can appear on the site. You should only create accessory relationships between child products.	toothbrushes

	replacement-toothbrush-heads

Example 4: This is an example of a product that varies by 2 dimensions: flavour and size. The Cherry flavour comes in 2 sizes but the Grape flavour only comes in 1 size.

A whole new way to reveal softer, smoother, healthier-looking skin.	Moisturizing	Dispose of pillow in trash receptacle (do not flush). For optimum freshness, keep vanity lid closed, and store unopened refill packs in a cool, dry place.		
This device might look like a scale, but it presents a broader snapshot of personal health by not only determining weight, but estimating body fat as well. It does this by sending a safe, imperceptible, low-level electrical pulse (50 kHz) through the body. (Healthcare professionals use similar electrical-pulse devices to estimate body fat by what is known as Bioelectrical Impedance Analysis, or BIA.) The device operates on four AA batteries (included), and its digital screen displays body-fat readings in 1.0-percent increments and weight in either 0.2-pound or 0.1-kilogram increments, up to	Works for both moderately active adults and extremely fit adults	The scale stores data (gender and height) for two users. Toe-tap a button to call up your data, and then step on the device. Within seconds, it displays your weight, followed by an estimate of body-fat percentage.
