If you are using Microsoft's Windows 7 or Windows XP operating systems and need to open a drive to install drivers, follow these steps:

Insert the Drive: First, insert the CD, DVD, or USB drive containing the drivers into your computer.

AutoRun: Typically, Windows will automatically detect the newly inserted drive and initiate the AutoRun program. If an AutoRun dialog box appears, you can directly choose to install the driver from there.

Manually Open the Drive:

In Windows 7/XP, open "Computer" (or "My Computer") and then double-click on the drive icon.

Locate Installation File: Find the installation file in the drive, usually named "setup.exe" or "install.exe."

Run the Installer: Double-click the installation file and follow the instructions to complete the driver installation.

Restart the Computer: After installation, restarting the computer for the drivers to take effect.

Please note that Windows XP system may not support the latest hardware and drivers. You can upgrade to Windows 10 or Windows 11 for better compatibility and security.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the manufacturer could void the user authority, which is granted by the Federal Communications Commission, to operate this product.
