Named camera
QR Code

• Your WiFi name will be located there (If the WiFi is not what you want to connect. please tap ⊗ to switch the needed WiFi), input the correct WiFi Password (Wi-Fi name and Password should not contain special characters ' and **&** .)and click "**Connect to WiFi**".And move your phone close to the camera and turn up the phone volume, then "**Next**" and "**Start**".

• The phone will send a sequence of beeps to the camera and try to connect WiFi, If wifi set up succeed, the app will go back to Camera page and show "**WiFi Configuration Succeed**"and the camera will be "**online**".
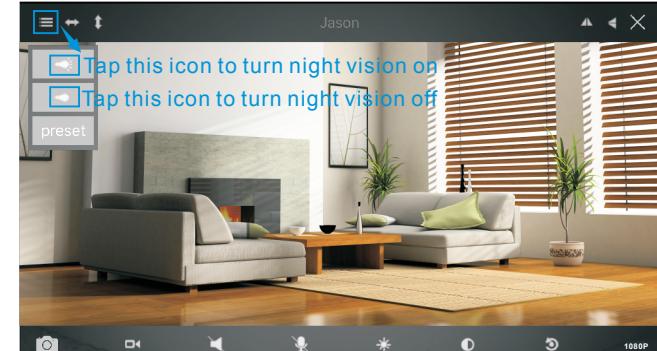

Attention:
When the camera shows "online", you can move the camera to other place where has a good WiFi signal.

If failed to connect to WiFi, Please try to connect the camera with ethernet cable and use "**Add camera via wired method**" to set up the camera.

FAQ:
1.Change Default Password
Always remember to change your password, tap the">"and then access to Edit Camera Page, get into"**Advanced Setting**" then"**User Setting**", change password and click ✓ to save.

2.If the night vision stops working, please turn on the IR light as below:

☐ Tap this icon to turn night vision on
☐ Tap this icon to turn night vision off

3. If you forgot the password, hold the "Reset" button around 15-20 seconds, then the camera will be back to factory default.Default User/password: admin/123456. Remember to configure WiFi again after the Reset.

Reset

LET US KNOW WHAT YOU THINK

Thank you so much for your order and trust to Wansview. Please feel free to contact us if you have any questions about the product application.

As a young and growing company, it would mean the world to us if you could leave an honest review about our product and services.
