## S IMPORTANT INFORMATION

The following basic precautions should always be followed:

- Read all instructions before using.
- This product is intended to be used in household and similar applications.
- This product is not a toy and not intended for use by children.
- The manufacturer does not accept responsibility for any damage or injury caused by improper or incorrect use, or for repairs carried out by unauthorised personnel.
- Do not use any abrasive, chemical or harsh cleaners.
- Do not store in direct sunlight or close to fires.
- Do not expose the spin mop to extreme hot or cold situations to prevent damage to the product.
- Do not use hot water or corrosive chemicals in the water tank. The water tank can be cleaned using warm, soapy water.
- Ensure to inform other people around that floors are wet which may cause slips.

Water bucket with carry handle  
Cover for clean water compartment

2 x Wet Mopping Pads

Water Bucket with  
Carry Handle

Upper Pole

Middle Pole

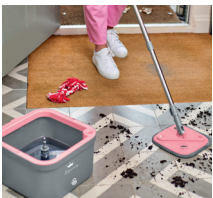

Lower Pole  
with Floor head

Cover for clean water  
compartment

## GET TO KNOW YOUR SPIN MOP

The water storage bucket has a plug in the bottom for ease of drainage.

The water storage bucket has two reservoirs, one full of clean water (central), which can be filled via the fill hole or by removing the plastic casing in the bucket, and a dirty water reservoir (peripheral). When the mop is spinning, centrifugal force and dual bristles agitate the mop fibres to remove dirt, and aqua jets squirt fresh liquid onto the mop head. To spin the mop, you must first unclip the lock button so it will spin in the bucket.

## HOW TO USE YOUR SPIN MOP

### **Before first use:**

Carefully remove your spin mop from the packaging and remove all packing materials.

To avoid danger, always keep packaging materials (plastic bags, polystyrene, etc.) away from children.

Dispose of the packaging in a responsible manner.

Check that the main product and the accessories are in good condition and show no signs of damage.

### **Assembly**

Before use, the spin mop must first be assembled. Simply align the three poles and screw them together. If you would prefer a shorter mop, simply leave out the middle pole.

To attach the lower pole to the mop head, insert the end of the pole that is not threaded into the corresponding fitting in the mop head, rotating the pole clockwise. Place the water bucket clean water compartment cover in the bucket by lining up the metal pole in the bucket with the spindle on the cover, and slotting it in. The cover must be lined up so that the corner with bristles is located in the corner of the bucket which has a hole in it to allow water to be poured in, otherwise the mop will not be able to spin on the cover for cleaning. You will know when the cover is properly seated as there will be minimal play.

To put the mop pad on the mop head, simply line up the square of the pad with that of the head, and ensure that the centre hole is in the right place. Press the pad down to ensure that the mop has properly adhered to the head.

### **Filling the Water Tank**

There are two ways to fill the clean water reservoir. Firstly, you can pour a mixture of detergent and water into the fill hole located in the top corner of the bucket.

Alternatively, you can remove the cover on the top of the water tank and pour liquid in. Always ensure that the clean water compartment cover is properly seated when replacing it back in the bucket.

## INSTRUCTIONS FOR USE

To use the mop to clean hard floors, follow the preceding steps depending on the cleaning required.

Install the mopping pad as described above. Pour a mixture of warm water and detergent into the fill hole, and seat the mop head onto the metal spindle. Ensure that the wrap-around clip on the bottom pole is in the open position, as this allows the mop to spin. Pump the mop handle up and down to spin the mop.

When the bucket has liquids in it, remember to hold it by the handle built into the top of the bucket.

Slowly pump the handle up and down to apply the mixture of detergent and warm water onto the mop. The bristles will simultaneously clean the cloth of the mop as well, during this process. Once you have wet and cleaned the mop cloth, the two round indicators on the top of the mop head will visibly show red. Once the indicators turn red you can continue spinning the mop dry as it will no longer jet water into the mop head.

## SPECIFICATIONS

| Product Specification | Details                      |
|-----------------------|------------------------------|
| Description           | Spin Mop                     |

| Mop Head              | Microfibre pads              |
| Safety Precautions    | Read instructions before use |
|                       |                              |

## CLEANING AND MAINTENANCE

Use a soft damp cloth to wipe down the surface of the spray mop to clean. If the soft abrasive pad is dirty, then use a cleaning tool with teeth to remove debris from the soft abrasive pad before following normal cleaning procedure.

To clean the range of mop heads available, either wash by hand or in the washing machine with mild detergent up to 40°C. Allow for the mop heads to thoroughly dry before use. It is recommended that each mopping pad should be replaced after being cleaned 100 times to ensure optimal performance of the spin mop.
